

The New Way to Manage Your MARC Records Database

Mitinet Library Services helps libraries get materials in the hands of patrons through better MARC records.

Mitinet offers powerful database management software and services to help you process and maintain MARC records, easier and more accurately...ultimately making library materials more accessible and maximizing the money and time you spend on maintaining your collection database.

Do any of these sound familiar?

- Bad MARC records make it harder for your patrons to find materials
- You're not satisfied with the records you get from your vendors and you spend too much time fixing them
- You want to control the consistency of your catalog - eliminate duplicates and incomplete records and standardize your collection
- You know your catalog is a mess but don't have the time to fix it
- You're paying a lot for reading programs and getting poor results because of incomplete or outdated data
- Your processing workflow is complicated, time consuming and pulls you away from other equally important priorities

This fall Mitinet Library Services™ is proud to announce the release of two new tiers of service for our flagship product, the cloud-based MARC records database management platform, BestMARC™.

Already the best record source and cataloger in the business, we've added **BestMARC Plus**, with an easy to use streamlined record enhancements feature, and **BestMARC Global**, with customizable features for global editing, and automated workflows that save you time and increase data accuracy.

Whether you catalog for a union catalog of 30 libraries or just one, with Mitinet™ you get the tools and experience to maintain the best MARC record catalog for your patrons, in much less time and for just a few dollars a month.

Not sure what you need?

Check out the features chart on the back of this flyer for more information.

And remember to sign up today for our FREE Library Database Analysis.
